

Johnson & Johnson MedTech

For lung cancer patients, getting an earlier diagnosis is crucial in creating the opportunity for accelerating treatment discussions – every minute matters.

Johnson & Johnson is striving toward improving outcomes for patients with lung cancer. To do that, we are innovating to revolutionize how pulmonary diseases, including lung cancer, is diagnosed with technology that can help physicians diagnose the disease earlier, as well as solutions that could treat it with precision¹.

Our MONARCH™ Platform, a robotically assisted bronchoscopy system, improves how physicians reach and biopsy lung lesions in the periphery of the lung² compared to traditional bronchoscopes. The MONARCH™ Bronchoscope is designed for continuous vision throughout the procedure.^{3*}†. It is designed to travel through the airways deep into the lungs and guide a biopsy instrument into even the most difficult to reach nodules, while maintaining vision during the most critical segment of the procedure, the biopsy^{4‡}.
