

Noah Medical

Our team of more than 150 experts in medical device engineering, robotics, software, clinical applications, and business leadership come from healthcare organizations worldwide. Through collaboration with leading interventional pulmonologists, our goal is to deliver medical robotic solutions designed to enable earlier diagnosis with greater confidence. Our Galaxy System™ aims to provide tool-in-lesion confirmation enabling our users to deliver patient-first care.

The Galaxy System with TiLT⁺ Technology™ is designed to overcome CT-to-body divergence and improve overall diagnostic yield.

This proprietary technology is designed to allow for real-time navigation updates and guidance in all areas of the lung, including an augmented fluoro feature designed to overlay a graphical representation of the target lesion during live fluoro video to help locate non-visual lesions.
